

An innovation for installation and protection of solar panels

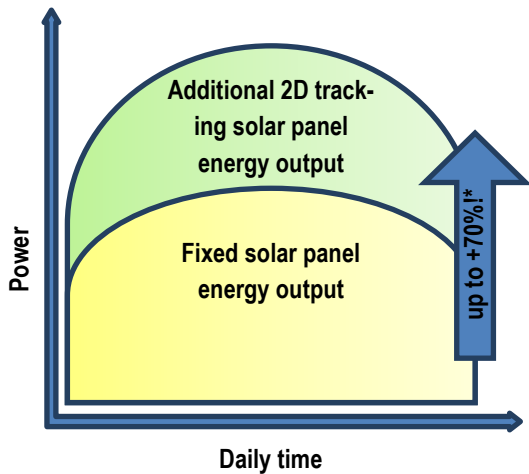

SauvSo optimizes the use of solar energy and increases its efficiency by protecting solar panels from weather conditions (hail, ice, snow, sand, wind, rain, etc.) using a retractable positioning and orientation system. It can adapt to both residential and commercial dwellings, which makes the product even more versatile.

- SauvSo can be easily integrated in urban areas;
- SauvSo promotes decentralization of electricity production;
- SauvSo optimizes electricity production from solar panels;
- SauvSo protects solar panels against weather hazards.
